

I am Dr. Bharathi (M.E, MBA, PhD), a professor at Sathyabama University having 19 years of experience in academics in which I have seen many young students come and go but Mr. Pesala Ravi Kumar is one of the persons who stand-out to be unique.

It is my pleasure to strongly recommend Ravi to accept his admission to your University. I have known him over his full years of under graduation during which I taught various CS courses like Data Structures, Python, Machine Learning etc. these subjects are very important in building a strong programming language foundation and he handled all these very well. Throughout my observation I can say he is very attentive, studious and always possessive a positive attitude towards academics even in negative situations he takes that as an experience and moves on. He has been very consistent in his academics and manages improve his performance always.

Through his academics, he showed great interest in practical learning techniques in labs, even requesting us to explain a bit practically in the classrooms. It's not just his technical knowledge and skills that impresses me, the way he enjoys learning new things and besides the academics, his participation in cultural events, technical events and few coding competitions not only from our University but used to attend in other colleges and workshops he organized and attended clearly displayed his interest in learning and as a person who has a lot of dedication towards what he doing. With my observation, I can say he is more interested in Machine Learning and Data science domains, having a good knowledge over those fields for me he used to well connect with me to get more knowledge.

As a part of the curriculum, every student needs to do a minimum of three projects and to choose professors as their mentors or guides, Ravi Kumar chose me as one of his mentors or guides. His understanding capabilities and talents helped him to complete the projects earlier than expected and he has published a paper on the project that he worked on in his final year. Even after his undergraduate studies, his learning ability has not changed as he is constantly working on projects on his own and research work for which he takes guidance and support with evaluation. He is also planning to publish another paper. I have my personal respect for him and sincerely believe Pesala Ravi Kumar will bring up his energy, passion and creativity again to the class and the university to make use of the program that he is applying for at your university.

Thanks & Regards,

Dr. B. Bharathi,

M.E., MBA, Ph.d, Professor

Department of Computer Science and Engineering

Sathyabama University, Chennai
